

# Scrum Advanced for Scrum Masters

Scrum allows companies to launch better products onto the market within shorter periods of time. Particularly complex IT projects and product developments require professional management with a clear focus on the customer benefit and on creating value. In order for this to work successfully, development teams are provided with a designated scrum master, who helps them to improve how they collaborate not only with each other, but also with the company in general.

This three-day, practice-based company training teaches participants the techniques that will help scrum masters to successfully launch scrum in a team, to support the product owner in his or her day-to-day activities and improve self-organization within the development team.

## Contact and booking

Lufthansa Industry Solutions

## Seminar objectives

The participants will know what the difference is between a scrum master and a project manager and how to lead a self-organized team in cross-divisional projects in their role as a scrum master. Moreover, they will be able to manage the introduction of scrum in projects and the accompanying shift toward agile working methods. They will have consolidated their experience and knowledge as a scrum master in a number of practical exercises.

## Participants

Project managers working in agile environments, approximately ten people

## Conditions of participation

- Scrum Basics workshop or equivalent experience in agile projects
- Basic understanding of the roles (product owners, scrum masters, development team), artifacts (product backlog, sprint backlog, product increments), meetings (sprint planning, daily scrum, sprint review, sprint retrospective) and relationships

## Overview of contents

### Description

- Supervising a team in a sprint
- Helping the product owner to perform his or her role
- What is the difference between a scrum master and a project manager?
- Scaling several scrum teams in large projects
- Managing scattered teams
- Managing international teams
- Launching scrum in a project
- Introducing scrum to a company
- Scrum vs. waterfall
- Change management using scrum
- How can scrum be combined with traditional PMI project management?

### Methods

Presentations, practical examples, discussions and exercises

### Dates, venue and duration

- Company training
- Flexible dates based on your needs
- In-house training at your company or at the premises of Lufthansa Industry Solutions
- Three days

### Participation fee

On request

**Customers can request that changes be made to the content and timetable of the workshop.**
